

HEATSLAVE

by VVS Technology

New, Safe, Simple

-  Use to turn your heating system on/off with your mobile.
-  Time your heating to come on and turn off automatically with your secure web page. Log on and with your own password, change the timing anytime from anywhere with a PC.
-  Protect your house, holiday home, boat, workshop from frost, water damage & damp using Heatslave to monitor the temperatures all day every day
-  Receive Text alarms to up to ten mobiles when the temperature reaches a settable point – ie '4 degrees' when water freezes and can damage your heating system. No more frozen pipes!
-  Temperature Logs – highest and lowest readings sent every day to your personal webpage .
-  Heatslave works on the mobile phone network – no land line required
-  System access, turn heating on/off with up to 10 different telephones
-  Cost effective and easy to use and install
-  Suitable for domestic and commercial use

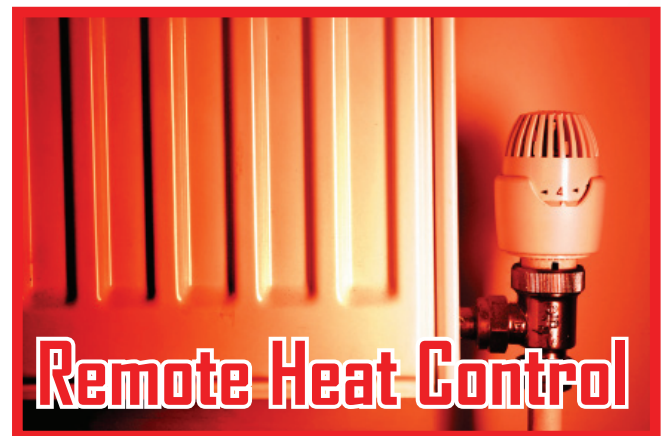

Testimonials

-  **Tom G - Mayo**
We have a holiday cottage in the West and use it all year round. Before Heatslave I was depending on my cousin who lives nearby to turn on the heating before I arrived and to keep an eye on it when the weather was cold. With Heatslave I am in control and dependant on no one. We can use our home with more comfort and less cost as we no longer leave the heating on for three hours per day when its not actually needed and when we are not there. At 8 degrees I now get a text and I can turn the heating on remotely with my telephone.
-  **John F Kelley - Boston USA**
We use Heatslave in a number of locations where we have equipment on unmanned sites which must be maintained within a specific temperature range. Now we remotely turn on the heating when needed in the winter and the aircon in the summer. - We have cut our energy costs by 60 %
-  **B Mc Glynn - Mc Glynn and Daughters Insurance Assessors - Kilcoole Co Wicklow.**
Most people will have insurance cover for a frost damaged house. But even with this cover an insurance claim is a hassle that most people can do without . Most insurance companies quite correctly will increase premiums after a claim. A claim can also effect your ability to move to a more competitive insurer for a period of time. We see the benefits of Heatslave from an Insurers point of view but also from the users – warm comfortable homes free from risk of water damage and dampness which also can do quite an amount of damage to wallpaper and all furniture.

Uses

-  Holiday Home – Freezing - Dont worry , Heatslave will tell you by SMS that the temperature (Which You Set) has been reached – allowing you to turn on the heating by a reply or a phone call thus avoiding water damage and burst pipes.
-  Save Money and be warm and dry – no more damp houses. Com home to a warm house after you have been away. Use Heatslave to turn on heating the day before you arrive by phoning it or setting it to come on using our unique Web Timer.
-  Heatslave will text you when its getting warm – automatically when the temperature rises a few degrees. So you can turn the heating off and save money.
-  Become part of the Heatslave Community – where other heatslaves in your area become part of a “Micro Climate” and inform you of temperature drops in your immediate area by e-mail.
-  Alarms – Heatslave allows for connection to alarm circuit – Sending you text alarms – ie Oil tank lid being removed, Door being opened, Smoke detector or alarm system backup. Send text messages to up to 10 different mobiles.
-  See www.heatslave.com for latest news and features.
